Project Proposal

An online insurance website called secure is the idea of the project. Its main aim is to offer two types of insurances the customer need which are motor insurance and travel insurance. The customer must register using his first name, last name, gender, contact number, email and password. Then the customer can login using the email and password only. The website allows the customer to get the insurance or rebuy the insurance as the website has a record of all purchases done. This makes the customer experience much better and fast as they don't need to reselect the insurance type and fill the information requested on the website. Even if the customer just needs to know the prices, the website will provide all information and prices of the insurances.

- **Identified tasks and a realistic work plan for project implementation:**

1. The group members gathered and brainstormed the idea of having a website that will be beneficial to majority of people.
2. The idea of having an online insurance website was chosen.
3. We decided on the number of pages needed and what services we could offer on the website.
4. The layout of the website was then generated to have an overall view of the website.
5. Implementation of the website started here.
6. We started creating the database.
7. Then we started working on the html coding and css.
8. PHP code was then written.
9. ERD diagram was created for the whole website.

- **Tools used in this project:**

1. Web Expressions 4.0: Web Editor
2. XAMPP: Free and open-source cross-platform web server solutions stack package
3. My PHP admin: Free and open-source administration tool for MySQL
4. Online visual paradigm website: To make ERD diagram.

- **Scenarios:**

1. Scenario 1: New user registration

Homepage > Scroll down > Fill in and submit the form Register > Forward to Login.

2. Scenario 2: User log in to their profile.

Homepage > Login > Fill in email and password > Forward to My profile

3. Scenario 3: Getting motor insurance

My profile > scroll down> fill motor insurance form> submit form>My insurance page

4. Scenario 4: Getting travel insurance

My profile > scroll down > fill travel insurance form > submit form >My insurance page

5. Scenario 5: Renewing insurance when expired

My insurance page > Click on insurance to be renewed > Confirm renewal

- **Features:**

- i. User features

1.1 Search engine in insurance page to look for any previous insurances.

1.2 Renew feature for expired insurances

1.3 Encrypted password.

1.4 Log in/ log out

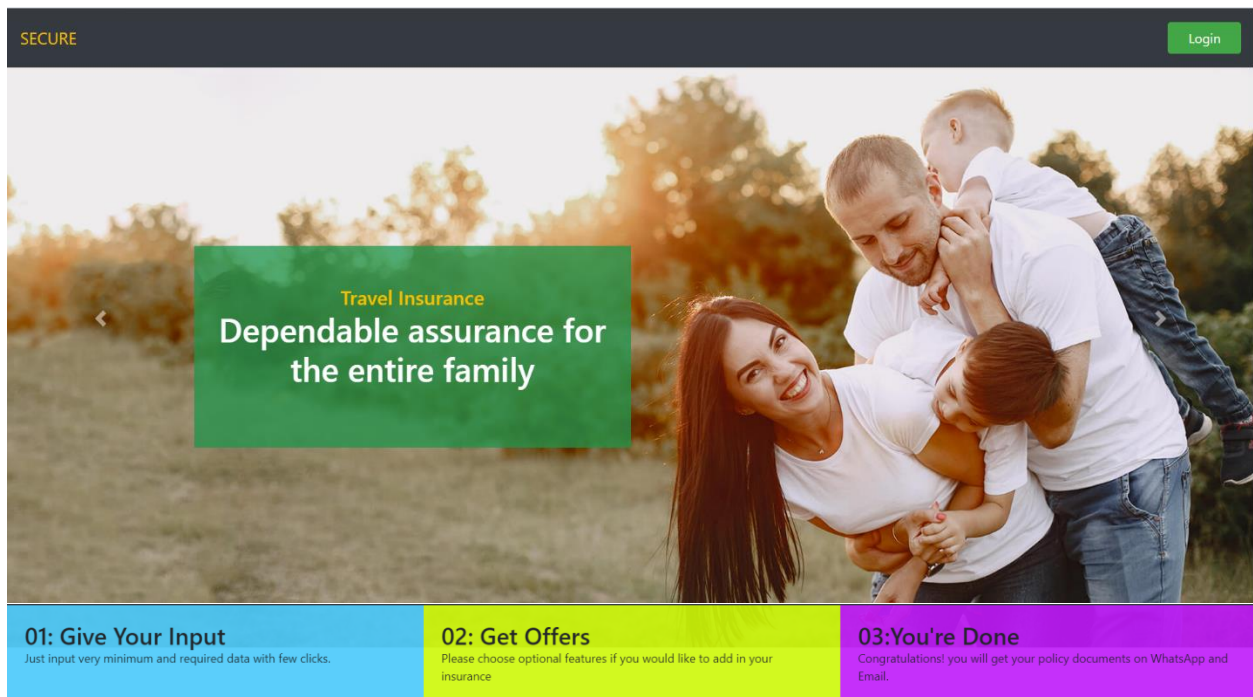

1.5 Variety of Agents and prices to choose from.

ii. Admin features

1. page for admin to View/Edit/Add/Delete list of customers.
2. The ability to change customer details.
3. Admin will login and customer list page will open directly.
4. There will be one admin account.

Design web pages

1. Home page:

2. Registration page:

```

- **ER Diagram**

- **Structure of the website:**

The diagram below shows the basic website structure:

- **List of the documents:**

The website pages and what it includes:

- Index.php:
 - Information about us
 - Steps of getting insurance
 - Types of insurance
- Regester.php:
 - Register form
 - Register submit bottom
- Motor.php:
 - Motor insurance form
 - Submit bottom
- Travel.php:
 - Travel insurance form
 - Submit bottom
- My_insurance.php:
 - Details of customer insurance
 - Search insurance feature
 - Renew the expired insurance data

Conclusion:

To conclude, finding the best layout for the project was one of the problems that we had to solve. During implementation, designing the database was the most encountered issue which then was overcome. Although we faced several obstacles, but the final target was achieved and the website worked as per the plan.
